

Mega H[®]

The World's Most Powerful Antioxidant

60 caps – Product Code 1450
120 caps – Product Code 1500
50gm powder – Product Code 1550

This revolutionary product helps rid your body of toxins and free radicals like no other nutritional supplement in the world! Mega H[®] restores energy to your body. Each time you consume a capsule of Mega H[®], powerful things are happening to improve your overall health.

Antioxidant Activity

Mega H[®] has been proven to be an incredibly potent antioxidant. A double-blind crossover study has shown that Mega H[®] protects the body from free radical damage. While on a regimen of 4 capsules of Mega H[®] a day for two weeks, patients showed a 43% increase in free radical protection as compared to the placebo group. Further studies revealed that Mega H[®] has the ability to scavenge the superoxide radical and hydroxyl radical, the most dangerous of oxygen free radicals.

Free radicals are unstable toxic compounds generated by everyday metabolic processes. Although the presence of these compounds is normal, poor eating habits, pollution, stress and other factors have led to a dangerous increase in the number of free radicals created by our bodies. An unhealthy diet, full of processed foods that are high in fat or sugar, toxins in the air we breathe, and present-day stresses can all lead to an increase in free radical production.

Free radicals, created through oxidation, are compounds that have lost an electron. They travel through the body, stealing electrons from vital tissues. Normal, healthy cells are damaged as molecules are forced to surrender their electrons to a free radical. This can impair the intracellular DNA and RNA, cell membranes, and numerous other important molecules in the cellular environment. Damage caused by free radicals is closely linked to many degenerative diseases.

Each capsule of Mega H[®] contains 250 mg of nanocolloidal silicate mineral, a compound of silica and hydrogen anions which contain loosely bound extra electrons. The extra electrons are freely given to neutralise free radicals, rendering them harmless. Mega H[®] is unique because

hydrogen, being the smallest element, can provide trillions of these electrons in each capsule.

Your Biological Terrain

With the proper biological terrain, the body can exercise its amazing capacity to restore itself. One component of a healthy biological terrain is pH balance. A pre-clinical trial showed that, in eight patients, saliva pH and urine pH both showed improvement over a period of 18 days supplementing with 4 capsules of Mega H[®] per day.

Cellular Hydration

A double-blind, placebo-controlled study was conducted on eight patients receiving 4 capsules of Mega H[®] per day for two weeks and then crossed over receiving 4 capsules per day of a placebo for two weeks. This study showed that, while on the Mega H[®] supplement, both extracellular and intracellular hydration improved. Extracellular water is the fluid that bathes the cells and intracellular water is the fluid inside the cell. Increased intracellular water is an indicator of cell integrity.

Energy Production

We all know that our bodies need an adequate supply of oxygen to survive, but few people realise the important role that hydrogen plays in our health. Oxygen burns hydrogen, producing energy to fuel the living system. Hydrogen and oxygen combine to produce ATP, the energy molecule that brings life to every cell in the body. ATP production is dependent on the production of NADH.

An in-vivo study has shown that Mega H[®] can reduce NAD⁺, producing NADH. NADH carries hydrogen into the mitochondria of the cell for use in the electron transport chain. The reactions that take place at this point ultimately create water and ATP. This is why athletes and other customers have reported a noticeable increase in energy upon consuming Mega H[®].

Cellular Communication

The billions of cells in our bodies must communicate with each other to maintain life. This intricate system of communication takes place through electrons. Electrons cannot move in the body without hydrogen (Albert Szent-Gyorgyi). Mega H® provides an abundant supply of negatively charged hydrogen ions, giving your body the electrons it needs to keep communication flowing at the cellular level.

Nutrient Absorption

One capsule of Mega H® in a glass of water reduces the surface tension of the water from 73 dynes to 45 dynes. This gives ordinary water the same surface tension as normal, healthy extracellular fluid. This is important because when the water you drink becomes more like your extracellular fluid, your body's ability to absorb nutrients is greatly improved. Your cells are constantly taking in nutrients for use and flushing out toxins for elimination. Proper surface tension greatly enhances the efficiency of these cellular reactions.

Safety

Mega H® consists of safe, natural source minerals.

Once Mega H® is consumed, it releases negatively charged hydrogen ions, normally found in fresh organic fruits and vegetables, to provide the life energy that is missing in our modern diets. Our bodies need these electrons to function properly on the cellular level and to maintain a healthy biological terrain.

Acute oral toxicity tests performed by an independent laboratory show safety up to 5 gm/kg of body weight. This is far above the suggested dosage, indicating that Mega H® is an extremely safe substance. If you experience any undesirable side effects, please discontinue using the product. If you have any existing health conditions or are taking any prescription medication, please consult your physician before taking this supplement.

Suggested use: One capsule in the morning and one capsule in the afternoon each with a full glass of water. Increase slowly to four capsules daily if desired. Do not take Mega H® without water.

Each capsule contains: Mega H® 250 mg, Flanagan Microclusters® (silica, potassium carbonate, magnesium sulphate), rice flour and rice bran oil.

This product is not intended to diagnose, treat, cure or prevent disease.
